Views

Normal View includes panes for your presentation's outline, the current slide, and any notes for that slide. You will probably spend more time in Normal View than in any other view.

Outline View focuses on the content of your presentation instead of its appearance. Use outline view when you want to develop your presentation and add large amounts of text.

Slide View displays the slides one at a time, as they will appear when they are printed or displayed in a presentation. Use Slide View when you want to enhance your slide's appearance.

Slide Sorter View displays all the slides in your presentation as *thumbnails* (itty-bitty pictures). Use Slide Sorter View when you want to rearrange the slides in your presentation and add transition effects between them.

Slide Show View displays your presentation as an electronic slide show. Use Slide Show View when you want to deliver your presentation.
